

DECLARATION OF AI USAGE

In accordance with academic integrity guidelines, I would like to declare the use of AI assistants during the development of this project. AI tools (especially Google Gemini) were utilized specifically for the following supportive tasks:

- **Code Development:** Assisting in writing simple utility functions and optimizing the performance of more complex code segments (ex. visualizations).
- **Code Structuring:** Helping generating clear comments and headers for better readability.
- **Literature Review:** Aiding in the summarization and extraction of key points from relevant academic papers to support the theoretical background.
- **Report Writing:** Assisting with phrasing, grammar, and ensuring an appropriate academic flow for the English text in this final report.

All core logic, architectural choices, experimental design, data analysis, and writings were independently formulated, executed, and verified by me (M.G.).
